Bies, W.: Thinking with the help of images: On the metaphors of knowledge organization.

Knowl.Org. 23(1996)No.1, p.3-8, 28 rcfs.

In the literature of knowledge organization, metaphors and images such as 'tree of knowledge', 'map of knowledge' or the 'world as a network' play an important role. This imagery although not yet thoroughly documented - should be examined from the various points of view of epistemology, the typology of metaphors, discourse analysis, metaphorology and iconography. The crucial point: Not only knowledge as such, but also its organization, is an essential part of our cultural heritage.

Judge, A.J.N.: Strategic Correspondences: Computer-aided insight scatfolding

Knowl.Org. 23(1996)No.1, p.9-15, 18 refs.

Building on the arguments of earlier papers, this paper advocates the use of centro-symmetric diagrams, controlled through suitable graphics software, to hold and re-configure concept sets — whether user initiated or supported by a library of such sets. It is emphasized that computer software features have evolved to such a high degree that it is worthwhile challenging any new approach to knowledge organization with the question: "what could that software feature offer to knowledge organization?". Often the software already available offers facilities superior to the needs articulated or envisaged by those concerned with knowledge organization. (Author) Nissan, E., Weiss, H., Yossef, A.: HyperJoseph: The hypertextual organization. Epistemological considerations. Knowl.Org. 23 (1996)No.1, p.16-24, 56 refs.

HYPERJOSEFN combines hypertext, information retrieval, literary studies, Biblical scholarship, and linguistics. Dialectically, this paper contrasts hypertextual form (the extant tool) and AIcaptured content (a desideratum), in the HYPERJOSEFH project. The discussion is more general and oriented to epistemology. (Authors)

Riggs, F.W.: Onomantics and Terminology.

Knowl.Org. 23(1996)No.1, p.25-33, 28 refs.

Lexicography is the science that undergirds the preparation of dictionaries as lists of words and phrases whose meanings are defined on the basis of semantic analysis. By contrast, Onomantics reverses this paradigm: it identifies concepts that are related to each other and need to be represented as important tools in the production and organization of knowledge. Terminology bridges these two approaches: it draws heavily on the lexicographic model while moving stolidly toward an onomantic framework — from a semantic focus on the meanings of words to an onomasiological concern with the identification and representation of concepts. The article is the first of a Two Part sequence in which the basic concepts and the rationale of Onomantics are identified. They provide a framework for enhancing the ability of Terminology to contribute to Knowledge Organization. The essential logic of Onomantics as the science of concept representation is explained and its general relationship to Terminology as a growing but mixed field of applications is discussed. KNOWLEDGE ORGANIZATION

Scope

The more scientific data are generated in the impetuous present times, the more ordering energy needs to be expended to contol these data in a retrievable tashion. With the abundance of knowledge now available the questions of new solutions to the ordering problem and thus of improved classification systems, methods and procedures have acquired unforescensignificance. For many years now they have been in the focus of interest of information scientists the world over.

Until recently, the special literature relevant to classification was published in piecemeal fashion, scattered over the numerous technical journals serving the experts of the various fields, such as

philosophy and science of science science policy and science organization mathematics, statistics, and computer science library and information science archivistics and muscology journalism and communication science industrial products and commodity science terminology, lexicography and linguistics

Beginning 1974, KNOWLEDGE ORGANIZATION (formerly INTERNATIO-NAL CLASSIFICATION) has been serving as a common platform for the discussion ofhoth theoretical background questions and practical application problems in many areas of concern. In each issue experts from many countries comment on questions of an adequate structuring and construction of ordering systems and on the problems of their use in opening the information contents of new literature, of data collections and survey, of tabular works and of other objects of scientific interest. Their contributions have been concerned with

- (1) clarifying the theoretical foundations (general ordering theory, science theoretical bases of classification, data analysis and reduction)
- (2) describing practical operations connected withnumerical taxonomy/ classification, as well as applications of classification systems and thesauri, manualand machine indexing
- (3) tracing the history of classification knowledge and methodology
- (4) discussing questions of education and training in classification
- (5) concerning themselves with the problems of terminology in general and with respect to special fields.

Aims

Thus, KNOWLEDGE ORGANIZATION is meant to be n programme for the improvement of classification methods and processes, a forum for discussion for all those interested in the organization of knowledge on a universal or a subject-field scale, using concept analytical and/or concept-synthetical approaches as well as numerical procedures and comprising also the intellectual and automaticcompilation and use of classification systems and thesauri in all fields of knowledge, with special attention being given to the problems of terminology.

K

KNOWLEDGEORGANIZA 'IfON publishesoriginal articles, reports on conferences and similar communications, the Newsletters of the International Society for Knowledge Organization (ISKO News) and the Committee on Classification Research of the International Federation for Information and Documentation (FID/CR News) as well as hook reviews, letters to the editor, and an extensive annotated hibliography of recent classification and indexing literature, covering now some 500 items in each issue.

KNOWLEDGE ORGANIZATION should therefore be available at every university and research library of every country, at every information center, at colleges and schools of library and informationseience. in the hands of everybody interested in the fields mentioned above and thus also at every office for updating information on any topic related to the problems of order in our information-flooded times.

KNOWLEDGEORGANIZATION was founded in 1973 by an international group of scholars with a consulting board of editors representing the world's regions, the special classification fields, and the subjectareas involved. From 1974-1980 IC was published by K.G.Saur Verlag, München. Back issues of 1978-1992 are available from INDEKS Verlag, too. (The 14 volumes of 1978-1992 are offered now at the highly reduced price of DM 200-).

As of 1989, KNOWLEDGEORGANIZA'I ION has become the official organofthe INTERNATIONAL SOCIETY FOR KNOWLEDGE ORGANIZATION (ISKO) and is included forevery ISKO-member, personal or institutional in the membership fee (DM 60.-/DM120.-).

Rates: From 1990 on for4 issues/ann. (including indexes) DM 128,-. No airmail delivery any longer. Membership ratessee above. – INDEK S Verlag, Woogstr. 36a, D-60431 Frankfurt.

Instructions for Authors

Manuscripts may be submitted in either English, German or French to the editor-in-chief in two sets (the original and one copy) typed in double space, comprising between 1500 to 3000 words. They should be accompanied by an English indicative abstract of 100-200 words. The contributions are refereed.

Criteria for acceptance will be appropriateness to the field of the journal (see Scope and Aims) taking into account the merit of the content and its presentation. Papers are accepted with the understanding that they have not been published, submitted or accepted for publication elsewhere and that, if the work received official sponsorship, it has been duly released for publication. Authors will usually be notified within 6 to 10 weeks. Unless specifically requested, manuscripts or illustrations will not be returned.

The text of the contributions should be structured by subheadings; it should contain (a) an introduction, stating the purpose, (b) a description of materials and methods in sufficient detail, (c) information on results or systems developed, and (d) a conclusion on and/or summarization.

References should be listed at the end of the paper with the numbers in brackets referring to such numbers in brackets within the text part.

Additional notes should be indicated in the text by lifted single numbers behind a word and equally collected with their texts at the end of the paper under the heading *Notes*.

Journal References should contain the names and initials of all authors, full titles of the publication, abbreviation of the journal according to the ISO Standard 4, volume number, year of publication in brackets, issue number and first and last page numbers. *Monograph References* should give the name(s) of the author(s), full title, edition, place of publication, publisher, year and the number of pages.

Examples: Brandhorst, J.P.J.: Quantifiability in iconography. Knowl.Org. 20(1993)No.1, p.12-19, 11 refs.

Hunter, E.J.: Classification made simple. Aldershot, GB: Gower 1988. 115p.

Illustrations should be restricted to the necessary minimum. *Graphs and diagrams* should be supplied as black and white drawings suitable to reproduction. *Half-tone illustrations* should be sharp, well-contrasted glossy prints. Illustrations should be numbered lightly with a soft pencil on the back. Numbered legends should be attached on a separate sheet.

Tables should be typed double-spaced on a separate sheet, contain a number and a title at the top and be cited in the text. Each column should have a heading.

Authors shall receive 25 reprints of their papers free of charge. Additional reprints may be ordered.

Corrections in gally proof exceeding 10% of the typesetting costs will be charged to the author.

Contributions on microflexible discs are welcome if delivered in DOS compatible standard software such as Word (DOS or Windows), WordStar, WordPerfect, DCA/RFT-files or plain ASCII code – our standard is Word/DOS (Word/Windows 6.0) and PageMaker 6.
